Hamza Abdagić

Founder, Horizon Tech | Azure Solutions Architect | Full-Stack Developer (React/.NET) | Building Scalable BI & Big Data Platforms for Global Enterprises

Bosnia and Herzegovina

Summary

What if your enterprise data architecture could scale dynamically while delivering real-time insights? As Founder of Horizon Tech and an Azure Solutions Architect, I architect exactly these transformations for organizations navigating digital modernization.

I bring 10+ years of full-stack development and cloud architecture expertise to solve complex data challenges. My technical foundation spans React and .NET, but my passion lies in building scalable BI and Big Data platforms on Azure that deliver measurable business impact.

What I Do:

I design end-to-end cloud solutions bridging legacy systems and modern data platforms. From React applications to .NET services, serverless Azure Functions to Kubernetes deployments, BI dashboards to real-time analytics - I architect the complete ecosystem.

Core Specializations:

Azure Ecosystem: Synapse Analytics, Microsoft Fabric, Power BI, Data Factory, Azure Functions, Azure Kubernetes Service, Azure DevOps

Serverless & Cloud-Native: Azure Functions, event-driven architectures, API Management

Full-Stack Development: React, .NET, C#, enabling seamless front-to-back solution design

Cloud Infrastructure: DevOps automation, CI/CD pipelines, microservices, Infrastructure as Code (Terraform)

Big Data & BI: Data warehousing, real-time analytics, ETL pipelines, executive dashboards

Track Record:

I've led international teams through complex cloud migrations, implemented Azure Kubernetes infrastructure for Identity & Access Management platforms, architected serverless solutions, and designed BI systems for telecommunications and enterprise clients. My experience spans Norway, Netherlands, Germany, and beyond - with deep expertise in GDPR compliance, multi-region deployment, and hybrid cloud strategies.

The Horizon Tech Difference:

We combine boutique agility with enterprise-grade expertise. You get direct access to senior-level architecture without large consultancy overhead. Every solution is tailored, every implementation hands-on, every client relationship personal.

Current Focus:

Helping organizations leverage Microsoft Fabric, Azure Synapse, serverless architectures, and modern BI platforms to transform their data strategy. Whether migrating from legacy systems, building event-driven architectures, or creating new data capabilities - I bring both strategic vision and technical execution.

Based in Sarajevo, serving clients globally. Let's discuss your BI modernization, Azure migration, or Microsoft Fabric implementation.

Experience

Horizon Tech d.o.o.

Founder & CEO

October 2025 - Present (5 months)

Sarajevo, Federation of Bosnia and Herzegovina, Bosnia and Herzegovina

Building enterprise-grade cloud solutions with boutique agility.

Founded Horizon Tech to deliver world-class Azure architecture, Big Data, and BI consulting to organizations seeking transformation without the overhead of large consultancies. We combine 10+ years of technical expertise with direct, hands-on client engagement.

What We Do:

Horizon Tech specializes in architecting scalable, cost-optimized cloud solutions on Microsoft Azure. We help enterprises modernize legacy systems, implement modern BI platforms, and build event-driven, serverless architectures that scale dynamically.

Core Services:

- Azure Cloud Architecture & Migration (Synapse, Fabric, Data Factory)
- Business Intelligence & Analytics Solutions (Power BI, Real-time Dashboards)
- Full-Stack Development (React, .NET, Microservices)
- Serverless & Cloud-Native Solutions (Azure Functions, Event-Driven Architecture)
- DevOps & Infrastructure Automation (Terraform, Azure DevOps, Kubernetes)
- Big Data Engineering & Data Warehousing

Our Approach:

Direct access to senior-level architecture. No junior consultants, no bloated proposals. Every solution is custom-designed, every implementation hands-on. We work as an extension of your team, delivering enterprise results with startup speed.

Client Focus:

Serving global enterprises across telecommunications, fintech, healthcare, and technology sectors. Specialized expertise in GDPR-compliant, multi-region deployments for European and international markets.

Technologies: Microsoft Azure | Azure Synapse | Microsoft Fabric | Power BI | Azure Functions | React | .NET | Terraform | Azure Kubernetes | Azure DevOps

Self-employed

Software Developer

February 2022 - July 2025 (3 years 6 months)

Deliver custom full-stack solutions for international clients across dating platforms, educational technology, and enterprise applications.

Notable Projects

Location-Based Dating Platform (UK Client)

Architected unique dating app for Spain's nightlife destinations, matching users by interests and real-time location

Built React Native mobile app with geolocation-based matching algorithms

Developed .NET backend with real-time messaging, push notifications, and matching system

Integrated maps and location services for venue-based social discovery

Educational Testing Platform (Non-Profit)

Created testing platform assessing high school students' economics knowledge

Built React frontend with interactive quiz interface and real-time progress tracking

Designed .NET backend managing question banks, test sessions, and analytics

Implemented scoring algorithms and performance reporting for educators

Enterprise Solutions

European Client Portfolio

Delivered web applications for clients across Europe using React + .NET stack

Modernized legacy systems to .NET Core, enhancing performance and scalability by 40%+

Built responsive, user-friendly interfaces meeting modern UX standards

Provided end-to-end solutions from requirements through deployment

Maintained long-term client relationships with ongoing support

Technical Capabilities

React, React Native for web and mobile

.NET, .NET Core for backend systems

RESTful APIs, real-time messaging, authentication

Cloud deployment (Azure), database design

Legacy modernization and optimization

Impact: Successfully delivered tailored solutions across dating, education, and enterprise domains with consistent quality and technical excellence.

Homesourcing

Software Developer

March 2022 - September 2024 (2 years 7 months)

Oslo, Norway

Lead full-stack Azure development for Norwegian enterprise clients, combining legacy system rescue with modern cloud-native application delivery.

Critical Payment Infrastructure Rescue

Legacy System Modernization

Rescued failing payment system for legacy .NET mobile applications serving Norwegian users

Diagnosed and resolved critical bugs in payment gateway integration causing transaction failures

Reverse-engineered undocumented legacy codebase, refactored for stability

Migrated payment processing to modern .NET framework, improving reliability and security

Achieved zero payment downtime post-modernization

Ensured PCI-DSS compliance for Norwegian market

Azure Cloud Applications

☁️ # High-Performance Web Apps

Architected multiple React/.NET web applications using Azure Static Web Apps

Leveraged serverless architecture achieving 99.9% uptime with minimal costs

Built globally distributed front-ends via Azure CDN with sub-100ms load times

Implemented automated CI/CD pipelines enabling daily deployments with zero downtime

Designed responsive interfaces meeting Norwegian digital accessibility standards

Full-Stack Architecture

Seamless Integration

Created robust .NET backend APIs for business logic and data processing

Built React front-ends with modern state management

Developed reusable component libraries accelerating delivery

Team Coordination

Cross-Border Collaboration

Coordinated multiple concurrent client projects with distributed European team
Bridged communication between Norwegian clients and international developers
Mentored junior developers on Azure and React best practices

Impact: Transformed unstable payment infrastructure into reliable system.
Delivered modern, scalable Azure applications for Norwegian digital economy.

IdentityWorkx BV

1 year 4 months

Cloud Solutions Architect | Software Development Team Lead
May 2022 - July 2023 (1 year 3 months)

Led technical architecture and team development for cloud-native Identity Governance & Administration (IGA) solutions, delivering enterprise-grade infrastructure for Fortune 500 clients.

Major Client: Atlas Copco

Industry-First Cloud Infrastructure

Architected and containerized the first-ever affordable cloud-based One Identity infrastructure for Atlas Copco

Designed Azure Kubernetes-based architecture enabling enterprise-scale identity management in the cloud

This groundbreaking solution paved the path for Atlas Copco's current identity management strategy

Reduced infrastructure costs while maintaining enterprise security and compliance

ServiceNow Integration

Developed custom ServiceNow connector for One Identity Manager, enabling seamless identity lifecycle automation

Integrated provisioning workflows with Atlas Copco's ITSM platform

Created reusable connector architecture for future implementations

Azure Infrastructure

Improved Azure Kubernetes infrastructure and Azure Pipelines for production IGA deployment
Implemented CI/CD automation reducing deployment cycles from days to hours
Established infrastructure-as-code practices for scalable deployments

Platform Modernization

Architected modern React-based dashboard (React, Vite, MUI) for major IAM client
Replaced legacy interface with intuitive platform for IAM solution control
Led project architecture design and technical documentation

Technical Leadership

Led cross-functional team, fostering knowledge-sharing culture
Drove R&D and prototype development for next-gen IGA capabilities
Mentored team on cloud-native architecture and Azure best practices

Impact: Delivered industry-first containerized One Identity infrastructure for Atlas Copco, enabling cloud IAM at enterprise scale.

Senior Software Developer

April 2022 - June 2023 (1 year 3 months)

Architected and developed core backend infrastructure for cloud-native, multi-tenant Identity Governance & Administration (IGA) software solution serving enterprise clients.

Backend Architecture & Development

Custom Identity Framework

Developed highly customized, high-performance version of ASP.NET Core Identity for NoSQL databases
Maintained full compatibility and configurability while optimizing for distributed database architecture
Implemented security-first design meeting IGA compliance requirements (SOC2, GDPR)
Created framework enabling multi-tenant identity management at enterprise scale

Database Architecture

Mastered NoSQL database design and implementation for high-availability IGA platform

Architected data models supporting complex identity relationships and hierarchies

Optimized query performance for real-time identity provisioning and governance workflows

Microservices & APIs

Designed and developed RESTful APIs for data fetching and manipulation across IGA solutions

Built microservices architecture with focus on high availability and fault tolerance

Implemented event-driven patterns for identity lifecycle management

☁️ # Cloud-Native Infrastructure

Gained hands-on experience with Kubernetes orchestration and Docker containerization

Contributed to CI/CD pipeline development and automation

Participated in infrastructure deployments and DevOps practices

Impact: Built scalable backend foundation enabling enterprise IGA platform to serve multiple Fortune 500 clients with high availability and performance.

Gate21

Software Developer

November 2021 - February 2022 (4 months)

Engineered groundbreaking 3D workflow optimization tool for AAA game development, dramatically accelerating artist productivity at THQ Nordic's Sarajevo studio.

Innovative Maya Plugin - Vertex Mapping & Mirroring System

Game-Changing Productivity Tool

Architected and developed custom Autodesk Maya plugin that cut 3D modeling and animation work time in half

Pioneered vertex mapping system applied to base models before sculpting/animation began, creating intelligent reference framework

Enabled automatic mirroring of both sculpting work AND animations across model symmetry, eliminating redundant manual work

Transformed 3D artist workflow: artists sculpt/animate one side, system mirrors to other side instantly

This innovation became critical tool in studio's production pipeline for character and asset creation

Technical Innovation

Developed complex vertex mapping algorithm tracking correspondence points across symmetrical geometry

Built real-time mirroring system preserving deformation quality and animation curves

Integrated seamlessly with Maya's sculpting tools and animation rigging systems

Created intuitive UI enabling artists to leverage technology without technical knowledge

Security Infrastructure

Built role-based access control (RBAC) system from scratch protecting game assets and IP

Implemented granular permissions for different production roles

Enhanced security across multiple concurrent THQ Nordic projects

Impact: Delivered production tool cutting modeling/animation time by 50%, saving hundreds of artist-hours per project. Solution adopted as standard tool in studio pipeline.

Authority Partners

Software Developer

May 2021 - September 2021 (5 months)

Sarajevo, Federation of Bosnia and Herzegovina, Bosnia and Herzegovina

Intensive learning period working with experienced global team, rapidly developing enterprise software engineering skills and database expertise.

Accelerated Professional Growth

Engineering Best Practices

Immersed in professional software development practices working with seasoned engineers

Learned comprehensive code review processes and collaborative development workflows

Gained hands-on experience with unit testing, TDD, and automated testing strategies

Absorbed industry-standard approaches to software architecture and design patterns

Participated in continuous integration/continuous deployment (CI/CD) pipelines

SQL Database Mastery

Deep Technical Learning

Developed expert-level SQL database skills through daily, intensive hands-on work

Learned complex query optimization, indexing strategies, and performance tuning

Mastered database design principles, normalization, and schema architecture

Gained proficiency in stored procedures, views, triggers, and transaction management

Studied under experienced database architects, accelerating learning curve

Full-Stack Development

Versatile Skill Building

Contributed to both backend and frontend across multiple production projects

Learned to build robust REST APIs and scalable business logic layers

Developed frontend development skills and client-side architecture

Understood end-to-end application development from database to UI

Mentorship & Collaboration

Worked closely with senior developers learning from their expertise

Embraced feedback culture improving code quality rapidly

Collaborated with international team members across time zones

Impact: Transformative learning experience that established foundation for enterprise-level software development and database expertise carried throughout career.

Glasfaser Connect GmbH

Software Developer

October 2019 - May 2021 (1 year 8 months)

Sarajevo

Developed comprehensive GIS and AR infrastructure platform for telecommunications deployment, integrating government utility data to prevent excavation accidents.

Multi-Layered Infrastructure Mapping

Critical Infrastructure Integration

Engineered data pipeline parsing AutoCAD shapefiles and GeoTIFFs from German government containing gas, electricity, and water grids

Created comprehensive multi-layered map combining telecommunications and utility data for complete underground visualization

Built ETL processes transforming diverse geospatial formats into unified database

Developed collision detection preventing accidental damage to critical utilities

Reduced excavation risks and multi-million Euro infrastructure damage potential

Augmented Reality Solution

Pioneered AR application using Unity and MapX for field technicians to visualize underground infrastructure in real-time

Integrated multi-layered utility data with AR overlay for location-aware awareness

Transformed government datasets into intuitive AR experience for field workers

Significantly improved safety and excavation accuracy

Technical Implementation

Geospatial Data Engineering

High-performance SQL database handling massive multi-source geospatial datasets

Parsed AutoCAD shapefiles, processed GeoTIFFs, normalized government data formats

Spatial indexing for real-time queries across multiple infrastructure layers

Full-Stack Architecture

React frontend with interactive multi-layer mapping

.NET backend processing complex geospatial data and coordinates

Unity AR mobile application

Azure DevOps CI/CD pipeline

Impact: Delivered platform preventing infrastructure damage, ensuring worker safety, and enabling telecommunications deployment across Germany.

Zerick

Software Developer

April 2019 - October 2019 (7 months)

Bosnia and Herzegovina

Fortunate early-career opportunity exploring emerging technologies, learning from experienced mentors across AR, VR, machine learning, and .NET development.

Augmented Reality Learning

AR Application Development

Had the privilege of learning AR development using Google ARCore and Apple ARKit

Contributed to multiple AR applications under guidance of senior developers

Gained hands-on experience with 3D rendering, object recognition, and spatial computing

Grateful for exposure to mobile platforms (Android/iOS) and computer vision fundamentals

This experience sparked lasting interest in emerging technologies

Machine Learning Journey

ML System Integration

Opportunity to build machine learning software from scratch with mentor support

Learned to integrate ML models into existing production systems
Absorbed knowledge about data preprocessing, model training, and deployment
Applied ML concepts to real business problems, bridging theory and practice
Deeply grateful for patient mentorship during this complex learning curve

Enterprise .NET Development

.NET Application Experience

Developed .NET and .NET Core applications focusing on performance and reliability

Learned architectural patterns and best practices from experienced engineers

Gained appreciation for code quality, testing, and production-grade systems

Built foundation in backend services and API development

Diverse Technology Exposure

Invaluable Learning Period

Explored AR, VR, ML, and web development in supportive environment

Learned to adapt quickly to new technologies and frameworks

Worked alongside leading experts who generously shared their knowledge

This enriching experience prepared me for future challenges in software development

Impact: Transformative period that shaped my technical foundation and approach to learning. Forever grateful for the mentorship and opportunities provided.

Education

Faculty of Information Technologies, University "Džemal Bijedić" in Mostar

Bachelor's degree, Computer Software Engineering · (2020 - 2024)
